Education

- B.Tech in Computer Science and Engineering** 2023 – Expected 2027
University Institute of Technology, RGPV **CGPA: 7.47**

Experience

TurfBooking.in – Frontend Development Intern Nov 2024 – Dec 2024

- Developed responsive user interfaces in **React.js** using reusable, component-based architecture, **props** and **state management**.
- Integrated **REST APIs** into frontend components to render live application data.
- Prepared production builds, configured environment variables, and deployed the application to hosting.

Technical Skills

Languages:	C++, Java, JavaScript, TypeScript, Python, SQL
Frameworks/Libraries:	Node.js, React.js, Express.js, Tailwind CSS, Framer Motion, Prisma ORM, BullMQ, WebSockets, WebRTC, REST APIs, JWT
Database:	MySQL, MongoDB, Redis
Cloud:	AWS (EC2), Render, Cloudinary, Vercel
Tools:	Docker, Docker Compose, Nginx, VS Code, IntelliJ IDEA, Postman, Figma
Version Control:	Git, GitHub
Core CS:	Data Structures and Algorithms, OOP, DBMS

Projects

TradeForge: Real-Time Paper Trading Platform | *TypeScript, Redis, BullMQ, Docker* [Link to Demo](#)

- Built a full-stack paper trading platform with **TypeScript**, **Node.js**, **Express.js**, **MySQL**, **Redis**, and **React**, supporting real-time market data and stock order execution.
- Implemented asynchronous order execution using **BullMQ**, processing **Market**, **Limit**, and **GTT** orders through background workers decoupled from the main HTTP request cycle.
- Built a real-time stock price pipeline using **Redis Pub/Sub** and **WebSockets** for low-latency, tick-level updates broadcast to connected clients.
- Implemented **idempotent** order processing and **transactional** balance and holding updates to prevent duplicate transactions and maintain data consistency.
- Containerised** the entire backend stack using **Docker** and **Docker Compose**, and deployed on an **AWS EC2** instance with **Nginx** as a reverse proxy.

WeChat: Real-Time Chat Application | *MERN, WebSockets, WebRTC, Redis, JWT* [Github Repo](#)

- Built a full-stack real-time chat application using the **MERN** stack with user authentication and responsive messaging.
- Implemented one-to-one and group chat with real-time message delivery using **WebSockets**.
- Added voice and video calling using **WebRTC**, enabling real-time peer-to-peer communication.
- Structured the **Node.js** and **Express.js** backend with **MongoDB** for persistent storage and **Redis** for caching frequently accessed chat data.
- Secured REST APIs using **JWT** authentication and protected routes.

Imagify: AI-Powered Image SaaS | *MERN, Cloudinary, Razorpay, Tailwind CSS* [Link to Demo](#)

- Built a **MERN** stack SaaS application integrating third-party AI APIs for image generation, background removal, and image enhancement.
- Integrated **Cloudinary** for image storage and management and the **Razorpay** payment gateway for credit purchases and payment processing.
- Designed **JWT**-based authentication, credit-based usage control, and per-user image history tracking.
- Developed a responsive frontend using **React** and **Tailwind CSS**, with **Framer Motion** for interactive UI animations.

Certifications

- MERN Stack Web Development** – *Udemy* **Focus:** JavaScript, React.js, Node.js, Express.js, MongoDB
- SQL and Database Fundamentals** – *Oracle* **Focus:** SQL, RDBMS, Database Design, Relational vs. Non-Relational

Achievements

- Solved **350+** **DSA** problems across **LeetCode**, **CodeChef**, and **GeeksforGeeks**.
